EP3 Alex Coles, Catharine Rossi, 2022-11-15 An examination of the notion of craft as it moves from moves from “modern craft” to “post-craft” amid new economies of making. The notion of the handmade has shifted from the margins to center stage. Craft's value is increasingly recognized across creative, economic, social, cultural, and political contexts. Amid dissolving disciplinary boundaries and the widespread appropriation of craft, its meaning is changing. While its claims to values such as authenticity and anti-consumerism are questionable, the role of craft is poised to be optimized within the contemporary climate. Amid new economies of making, as craft moves from “modern craft” to “post-craft,” we need to examine not only the practice of craft but also its mediation and interpretation.

Recent Advances in Prostaglandin, Thromboxane, and Leukotriene Research Helmut Sinzinger, Bengt Samuelsson, Sir John R. Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11 The International Symposium on Prostaglandins and Related Compounds, first held in Vienna 1972, revisited the city after 24 years for the 10TH Symposium. For the many researchers working in this multi-disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world. This scientific exchange was largely encouraged by the unseasonably cold and rainy weather. For the first time, there was quite a large attendance from the former Communist countries. Eugene Garfield prepared a key note address delivered during the meeting (The Scientist 1996, 12) reviewing the contribution of the Nobel Laureates U.S. von Euler, I.R. Vane, S.K. Bergstrom, and B.I. Samuelsson, discussing the relevance of the more than 40,000 papers in this area published since 1991. Overall, there is still a rapidly growing interest, and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting. Beside the lectures there were 19 workshops covering nearly all the topics of key interest. All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands. Special thanks to Dr. Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time. Looking forward to seeing all of you again in Florence in 1999, hopefully with much more sun.

Drug Delivery Challenges and Novel Therapeutic Approaches for Retinal Diseases Christopher L. Cioffi,2020-09-23 This book reviews the current state of ocular drug therapy and future therapeutic opportunities for a wide variety of conditions, including Age-related Macular Degeneration, Diabetic Retinopathy and Macular Edema, Glaucoma, and Inherited Retinal Diseases. Retinal diseases are major contributors to moderate or severe vision impairment in adults aged 50 years and older. The respective patient populations for many of these indications is expected to significantly increase as the world population continues to grow older. An improved understanding of the etiological underpinnings of ocular degenerative diseases over the past decade has significantly bolstered ophthalmic drug discovery. In this volume, contributions from leading experts explore the unique challenges faced for ocular drug discovery and delivery providing the reader with detailed information on ocular pharmacokinetics, in vitro, ex vivo and in vivo models for retinal disease pathology and emerging gene therapy treatments. The book is intended for all researchers and clinicians who wish to increase their knowledge on the latest findings in ocular drug therapy.

Basic Mechanisms Controlling Term and Preterm Birth Kristof Chwalisz,Robert E. Garfield,2013-11-11 The mechanisms that initiate labour (i. e. , the conversion of the quies cent uterus to an active and reactive organ at term) are poorly understood. Of considerable importance are the factors that control preterm labour and preterm birth, with their devastating effects on society. This problem is the leading obstetrical issue. Preterm labour affects ap proximately 10% of all pregnant

women (even higher numbers are reported for less developed countries or where prenatal healthcare is a low priority) and it is the leading cause of morbidity and mortality of babies. Current practices to arrest preterm labour, once initiated, are ineffective. In addition, procedures to stimulate labour and dilate the cervix at term may not be used effectively. On October 19th - 21st, 1992, a Schering Foundation Workshop took place in Berlin to discuss the Basic Mechanisms Controlling Term and Preterm Labour. Leading scientists from Europe and North America were assembled to consider the fundamental systems which regulate the uterus and cervix during pregnancy. The topics in the symposium ranged from key cellular events governing uterine contractility and cervical dilatation during labour to clinical advances and applications. This book contains the proceedings of the workshop. We were pleased to have been part of the workshop and to have been responsible for its organization.

Capsaicin - Sensitive Neural Afferentation and the Gastrointestinal Tract Gyula Mozsik, Koji Takeuchi, Omar Abdel-Salam, 2014-07-16 The capsaicin, a component of paprika, has been used in the culinary practice of every day nutritional practice. This agent is known to cause a variety of actions in the body through activating capsaicin-sensitive afferent neurons. A recently launched book entitled, Capsaicin-Sensitive Neural Afferentation and the Gastrointestinal Tract: from Bench to Bedside, is attractive for several reasons. First, Prof. Mozsik, a chief editor of this book, is known internationally as an expert in capsaicin pharmacology. Since he has worked for many years as a head of internal medicine, taking care of patients with various GI diseases, he is able to make a correct interpretation of various findings obtained in basic researches to clinical events. Second, although there are many articles about capsaicin, they mostly deal with basic research and finding but do not include much about clinical finding. Third, this book encompassed review articles written by internationally accepted scientists leading the field of capsaicin research, who highlighted the current state of knowledge on pharmacology, physiology and clinical pathophysiology of capsaicin-sensitive afferent neurons, and discussed directions for future research. Overall, this book is for people who are interested in the capsaicin action in body.
